If you look at the PDF documentation you will see a change I made in May 2019 which allows multiple iterations through the `_cm_output_Multi()` method. This means using the `_cm_output_Iterations()` method to create an array of primary keys in the `$iterations` variable. The `_cm_output_multi()` method will be called separately for each entry in the `$iterations` array.

I have produced a test set which reads `MNU_PATTERN` -> `MNU_TASK` -> `MNU_NAV_BUTTON`. All the scripts and sample PDF output are in the attached zip file.
