If you look at the PDF documentation you will see a change I made in May 2019 which allows multiple iterations through the \_cm\_output\_Multi() method. This means using the \_cm\_output\_Iterations() method to create an array of primary keys in the \$iterations variable. The \_cm\_output\_multi() method will be called separately for each entry in the \$iterations array.

I have produced a test set which reads MNU\_PATTERN -> MNU\_TASK -> MNU\_NAV\_BUTTON. All the scripts and sample PDF output are in the attached zip file.
