This update contains some bug fixes

Database changes:

- none

Other changes:

fixed bug in mnu_control.class.inc which prevented password encryption from being toggled ON or OFF.

updated dict_table.dict.inc to specify a different list of options for the alternative language table.

updated std.table.class.inc to include a new variable \$no_exit_screen_on_error which may be set during an UPDATE1 task.

updated dict_table.class.inc to deal with the situation where the table name in alt_language_table has been deleted for some reason. It will report the error but set the \$no_exit_screen_on_error property which will cause the update1 controller to remain in the screen instead of terminating so that the error can be corrected.

updated std.update1.inc so that if the object's \$no_exit_screen_on_error property is set after returning from the validateUpdate() method it will not return to the the previous screen before reporting the error.

corrected some of the SQL scripts in the CLASSROOM, PRODUCT and SURVEY prototypes.
