Hello,

I packaged up an existing installation, and deployed on a new system. I moved both the databases and the Radicore tree.

Now, when I try to add records to specific tables, I get:
---
This application has encountered an unrecoverable error

The following has been reported to the administrator:
2007-05-16 12:19:26

Fatal Error: %1$s (# %2$s).

Error in line 278 of file '/data/www/html/search/includes/dml.mysqli.class.inc'.

Script: /search/search/configuration(add1).php

User Id: MGR

Remote Address: 142.101.244.26

Request URI: /search/search/configuration(add1).php
---

Other tables work fine, any ideas, I have turned on all the debugging features, but cannot see anything in those.

Thanks,

Dan
