This function was always returning an empty string for me.
On line 943 I added the following code and it seems to be working properly now.

```
} else {
    // field is not duplicated, so copy to output array
    if ($last_separator) {
        $array_out[] = $last_separator;
        $last_separator = null;
    } // if
    $array_out[] = $fieldname .$operator .$fieldvalue;
} // if
```
