---

This function was always returning an empty string for me.

On line 943 I added the following code and it seems to be working properly now.

```
} else {  
    // field is not duplicated, so copy to output array  
    if ($last_separator) {  
        $array_out[] = $last_separator;  
        $last_separator = null;  
    } // if  
    $array_out[] = $fieldname .$operator .$fieldvalue;  
} // if
```
