Hi Tony,

This is what I have tried.

in my multi4, I have the outer class called "sources_destination" which extends sources class, and includes the `_cm_changeConfig` function that sets up the foreign field 'sel_publish_key'. This works, when I select the sources key, and then the multi4 button, I get the outer of "sources" with the 'sel_publish_key' from the destination table displayed as a dropdown. I can select the destination key.

I then added the `_cm_getPkeyNames` function to the "sources_destination" class. The function contains:

```
$pkey_array[] = 'sel_publish_key';  
return $pkey_array;
```

Is this correct, I do not see the field in the class used in the update4.

Dan
