Hello,

Below is a summary of my installation environment and the error message I receive. Any help or guidance is greatly appreciated...

Thanks

Bill

When installing on Fedora Core 4, php 4,
Apache 2.x
document root is set to /home/golfer/www

my httpd.conf directory directive is also set as:

<Directory "/home/golfer/www/radicore">

Options Indexes FollowSymLinks

AllowOverride All

Order allow,deny
Allow from all

</Directory>

I believe I followed the install instructions completely.

phpinfo() from a test script reports my include path as

.:/home/golfer/www/radicore/includes:/home/golfer/www/radico
re/menu:/home/golfer/www/radicore/audit:/home/golfer/www/rad
icore/dict:/home/golfer/www/radicore/workflow

I try to run the logon.php script and receive the following error:

This application has encountered an unrecoverable error
The following has been reported to the administrator:

2006-10-11 13:32:14
Fatal Error: MySQL error: 1064 : You have an error in your SQL syntax near 'FROM php_session WHERE session_id='08b98f4536146a4787782ac950e1e4b8' ' at line 1 (# 256).

SQL query: SELECT SQL_CALC_FOUND_ROWS * FROM php_session WHERE session_id='08b98f4536146a4787782ac950e1e4b8'

Error in line 372 of file '/home/golfer/www/radicore/includes/dml.mysql.class.inc'.

Script: /radicore/menu/logon.php

Remote Address: 24.185.xxxx.xxxx

Request URI: /radicore/menu/logon.php

That SQL statement is perfectly valid as I have run it through phpMyAdmin without error.

What version of MySQL are you using? If it is less than 4.0.0 then the SQL_CALC_FOUND_ROWS function will not work. The minimum version acceptable to Radicore is 4.0.6, as mentioned on page http://www.radicore.org/radicore-for-php.php

I am using mysql version 3.23.58.

I guess I need to upgrade, I was not aware of this requirement. Thankyou for the quick response. I will repost the result after upgrading.
