hi,

I do not understand how to create a CASE, I have my workflow completed and validated.

I do not understand how to start.

I need an answer please.

thank you very much.

Each workflow has a starting task associated with it, something which inserts a new database record. Whenever that task is run and a record created, a new workflow case is automatically started with its context set to the primary key of that record.

Thanks!
i finally started!.
So, I need to create a very simple task to internalize with that. i need some tutorial, or some help please.

thanks for your answer!

Look in radicore/workflow/docs/index.html for examples of several different workflows.

Thanks, but i saw those examples before, and i can create the transitions, arcs, places. and i validate the workflow.
my question is... How to create my own script.php for my porpuse?

thanks, and apology for the inconvenience, I love your work

As I said in an earlier post, the starting task must be one which adds a record to the database. I suggest a task which is based on the ADD1 pattern would be worth considering.
