Inside of batchInit($batchfile)

Currently
Line 21: $ini_array = parse_ini_file('batch.ini'); // retrieve variables from file

Shouldn't this be changed to
$ini_array = parse_ini_file($batchfile); // retrieve variables from file

-Dave

*edit for spelling*

No. The batch.ini file contains settings that apply to any number of batch jobs, and they are put into a separate file so that they do not have to be duplicated.

Take a look at the documentation at
http://www.tonymarston.net/php-mysql/infrastructure-faq.html #faq56 and you will see what I mean.

Okay I see what you're saying now, I was under the impression that the intention was to be able to have specific ini's for different scripts.

No. The batch.ini file is general purpose and shared among any number of scripts. If you want a specific setting for a particular script, then you place that setting within the script itself.
