---

I have installed Radicore and have it up and working as long as I log on using client-side XSL transformations. When I select the first logon link I receive the following error:

This application has encountered an unrecoverable error  
The following has been reported to the administrator:

2006-12-12 10:00:27

Fatal Error: XSLT functions are not available. (# 256).

Error in line 1295 of file '/var/www/html/radicore/includes/include.xml.php4.inc'.

Script: /menu/logon.php

Remote Address: 192.168.0.51

Request URI: /menu/logon.php

I am running Linux – CentOS 4.4 (Final), Apache 2.0.52(CentOS), MySql 4.1.20 and PHP 4.3.9.

Thank you in advance for your help.

RS

That error message is pointing out that you have not configured the Sablotron XSLT extension in your copy of PHP. Please refer to <http://www.radicore.org/radicore-for-php.php> for details of which extensions are needed for the different versions of PHP.

To close the loop on this I ended up upgrading PHP to version 5.0.22 and the problem was resolved.

Thanks again for your help.

If you read the manual at <http://www.php.net/manual/en/ref.xslt.php> you will see that this extension is not part of core PHP, so has to be configured in expressly. So does the DOM XML extension.

If you are installing on Windows then all you have to do is remove the ';' character in front of the 'extension=php\_domxml.dll' and 'extension=php\_xslt.dll' lines in your php.ini file.
