Dear Tony
I'm trying to execute some javascript code associated to an input field, this is my _cm_changeConfig function:

```
function _cm_changeConfig ($where, $fieldarray)
    // Change the table configuration for the duration of this instance.
    {
     if ($GLOBALS['task_id'] == 'inp_muestraspmc(add1)' OR $GLOBALS['task_id'] ==
'inp_muestraspmc(upd1)')
     {

     $this->fieldspec['fechamuestra']['javascript'] = array( 'javascript' =>
"ng.ready(selectDateFromCalendar('fechamuestra'));");
     } // if

     return $fieldarray;

    } // _cm_changeConfig
```

That's what I see as the HTML source code from the browser

```
<td colspan="3">
                <script language="javascript">ng.ready(
selectDateFromCalendar('fechamuestra'));</script>
                <input name="fechamuestra" id="fechamuestra" class="text" type="text"
value="2015-01-12" maxlength="12" size="12" />
</td>
```

But, what I need is something like this

```
<td colspan="3">
                <input name="fechamuestra" id="fechamuestra" class="text" type="text"
value="2015-01-12" maxlength="12" size="12" />
                <script language="javascript">ng.ready(
selectDateFromCalendar('fechamuestra'));</script>
</td>
```

Please let me know if I'm doing something wrong.

Thanks for advance!

Why does the order of the <script> and <input> tags make a difference?

I'd also certainly like to know about script and input tags?

Those are HTML tags and therefore not part of the PHP language. You will need to look at the HTML documentation.
