Hi Tony,

I have the following sequence of transactions:
- UPD1
- LIST2, via $this->scriptNext() on _cm_customButton()
- LIST2, via navigation bar
- UPD4, via navigation bar
On error on UPD4 I need to return to the UPD1 transaction; how can avoid to return to LIST2 transaction?

Thanks for advace

Best regards!

You neeed to check out the append2ScriptSequence function.

You might also find some use for the restart method which is called whenever a task is restarted after a child task is terminated. You could use this to check where you just came from and execute the scriptPrevious function.
