Hi all...

I receive the following error after clicking the Logon link on the main page of Radicore. Hopefully it's an easy database connection config issue, but I don't know where to fix it.

Fatal Error: eregi() [function.eregi]: REG_BADRPT (# 1049).

Error in line 49 of file '/var/www/html/invapp/includes/dml.mysqli.class.inc'.

Host Info: Localhost via UNIX socket
Server Version: 5.0.22
Client Info: 5.0.27, Client Encoding: latin1

Any help is greatly appreciated. Thanks in advance.

Thanks Tony...I had '***' in the dbprefix in config.inc.

Is there anyway to hide/encrypt the dbuserpass field in config.inc?

There is no built-in method of encrypting or hiding the password in the config.inc file, but why does there need to be? If you follow the instructions and place the INCLUDES directory outside the web root there is absolutely no way that anybody can view the contents of that file through their web browser. Only someone who has direct access to your server could see the contents of that directory, and therefore that file, so this should be secure enough.

I believe there are third party products which can encrypt or obfuscate your PHP files, such as Zend Guard, but I have never used them.

k...thanks. I'll reread the directions. I remember seeing something explaining that but got caught up in installation of that and a few other things. Thanks for the help.

Bryant
