

I am trying to get Radicore v2.0 to work on a single database.

I have created a new mysql database named BLOG and a new user BLOGAdmin with full access to it.

I have also run the requisite mysql schema and data files against BLOG as per the installation guide.

I have the following config.inc as per FAQ150 and FAQ92:

```
<<
...
if (preg_match('/^(127.0.0.1|localhost|desktop|laptop)$/i', $_SERVER['SERVER_NAME'])) {
    global $servers;
    // server 0
    $servers[0]['dbhost']      = 'localhost';
    $servers[0]['dbengine']    = 'mysql';
    $servers[0]['dbusername']  = 'BLOGAdmin';
    $servers[0]['dbuserpass']  = '<real password>';
    $servers[0]['dbnames']     = 'audit,dict,menu,workflow,product,survey';
    $servers[0]['switch_dbnames'] = array('audit' => 'blog',
        'dict' => 'blog',
        'menu' => 'blog',
        'workflow' => 'blog',
        'product' => 'blog',
        'survey' => 'blog');
    // server 1
    $servers[1]['dbhost']      = 'localhost';
    $servers[1]['dbengine']    = 'mysql';
    $servers[1]['dbusername']  = 'BLOGAdmin';
    $servers[1]['dbuserpass']  = '<real password>';
    $servers[1]['dbnames']     = '*';
    ...
}>>
```

When I navigate my browser to <http://localhost/radicore/index.html> and click the Logon link, I get the following error:

```
<<
This application has encountered an unrecoverable error
```

The following has been reported to the administrator:

2016-10-15 20:30:27

Fatal Error: MySQL: Unknown database 'audit' (# 1049)

Error in line 89 of file 'C:\xampp\htdocs\radicore\includes\dml.mysql.class.inc'.

>>

Any suggestions would be appreciated.

Thanks in advance.

My apologies. This needs just a quick one-line edit. In file std.table.class.inc go to method _getDBMSengine() and change the 4th line from

```
$this->dbname_server = $dbprefix.$dbname;
```

to

```
$this->dbname_server = $dbprefix.$dbname2;
```

That works.

Thank you very much.
