Subject: postgresql error using lower/upper/ilike functions

Hi Tony,

I'm trying to search case insensitive in PostgreSQL. Postgresql doesn't allow you to make text searching case insensitive.
You have to resort to either citext or lower/upper functions in your query. I don't like any of the options.
Radicore isn't allowing the syntax of postgresql lower function in combination with a LIKE.
It also doesn't recognize the 'ILike' operator.

The following throws a "Cannot extract token from:'%hello%'" error:
$where = "lower(product_name) LIKE '%hello%'";
'product_name' is a column in the database.
Seems to happen in the where2indexArray function from include.library.inc

It does however work with the '=' operator.
$where = "lower(product_name) = '%hello%'";
Of course the wild cards wouldn't work.

Tree questions:
1. How can I fix this?
2. Is there another way I can do case insensitive searching on texts in Radicore with pgsql?
3. Is there a way to hook into the default search to change the query to wrap the column name with lowar?

I have amended include.library.inc so that it will allow both of the following in the WHERE string:

lower(product_name) LIKE '%hello%'"
product_name ILIKE '%hello%'

Yes. It works!
Thanks!

This updated file include.library.inc appears to be missing in the April 2017 release.

I have tested that file and cannot reproduce the problem. What is the WHERE string which you are using?

The file attached to your post (2017-03-05) and that in the 2017-04-02 distribution are different. Attached both here. Kindly reconcile.

They are different because I made some other changes since 2017-03-05.

I cannot reproduce this problem in my development environment. What is the WHERE string which you are using?

I haven't checked out radicore fully yet and there is no WHERE string that causes any error yet. I have been looking at recent posts and major releases since 2006, tracing it's evolution atleast after coming to radicore.org.

I find that once logged in, if we enter the login page it expects us to login again - no session persistence yet.

How do you check?
