The last 2 relationships in the radicare-tutorial-001.pdf cannot be entered. See screenshot. Only the CALCULATED option is available for the parent field in the tutorial.

I have assumed that where CASCADE is used, we choose CASCADE (framework).

In Debian 8 (64 bit) the includes folder was added to the php.ini file and installed with the following:

```
mysql
CREATE DATABASE `testdb` CHARACTER SET utf8 COLLATE utf8_unicode_ci;
USE `mysql`;
GRANT ALTER, ALTER ROUTINE, CREATE, CREATE ROUTINE, CREATE TEMPORARY
TABLES, CREATE VIEW, DELETE, DROP, EVENT, EXECUTE, INDEX, INSERT, LOCK
TABLES, REFERENCES, SELECT, SHOW VIEW, TRIGGER, UPDATE ON `testdb`. * TO
'appusr'@'localhost';
FLUSH PRIVILEGES;
USE `testdb`;
source /var/www/webroot/radicore/xample/sql/mysql/xample-schema.sql
source /var/www/webroot/radicore/xample/sql/mysql/xample-data.sql
quit
```

<http://domain.tld/radicore/>
Login => MGR / password

Navigate to:

Home» Menu System» Subsystem

Add New Subsystem:

TESTDB / test subsystem / testdb / tst_

Submit

Tick TESTDB

Click "Build Directory"

```
cd /var/www/webroot/radicore
```

```
# /var/www/webroot/radicore/testdb gets created with all sub-folders needed.
```

Have you imported the columns for the newly imported tables? Importing tables and importing columns are separate tasks.

Yes. That is how I was able to get the other relationships done.

Please note that the menu and dict export sqls for xample prototype is duplicated in the sql/mysql/ and sql/ folders in the latest distribution.

I will try again on a fresh install.

The Home link should be available along with the links at the top since it is missing in some places. Synchronising the naming of the links / buttons with the breadcrumbs would be useful.

Is there a GitHub repo for Radicare? Mirroring it there would be useful.

The only way that the Parent Field dropdown will not contain any column names is when you have not yet imported the columns for that table.

The "Home" link should always be available in the breadcrumbs area.

I do not use GitHub, and I have no plans to do so.

Thanks a lot. I had not imported the columns for the last 3 tables that were in page 2. All 9 relationships are in place now.
