I have been noticing that a previous selection has been taking priority over my current selection. e.g., I select a table in the "List Table by database" screen of the dictionary. Choose read, then Generate PHP to create a task. I go into the menu system to create nav buttons for the newly created task. Then I go back to the "List Table by database" and choose a different table, click Read and my previous table is the one displayed in the detail screen.

Have you noticed this before? I have noticed it in previous versions but was never able to reproduce it. If you need more information let me know where I should be looking with a debugger.

version 1.29

php 5

mysql 5

More specifically.

Choose the Database tab

Select a database

Choose Tables

Select a table "x"

Click read (displays "x")

Click "Home"

Choose the Database tab

Select the same database

Choose Tables

Select a table "y"

Click read (displays "x" again)

I've noticed this on rare occasions, but I've forgotten what I did to get there so have not been able to reproduce the fault and fix it. I have now spotted what is causing the problem, and the attached file should deal with it. Let me know if it works for you.

On line 30 you have:  
\$new\_selection = false;  
I commented it out and it works fine.  
Thanks

Whoops! I put that extra line in to run another test, but I forgot to take it out.
