When I start upgrade my instalation on 1.33, I found in
/radicore/menu/sql/mysql/alter_table(2008-01-03).sql
sql instruction :

ALTER TABLE 'mnu_role_taskfield' DROP INDEX task_id_2;
Parser could not execute this ALTER TABLE because couldn't find task_id_2!

In /radicore/menu/sql/mysql/menu-shema.sql I found
CREATE TABLE .....
KEY 'task_id' ('task_id')

Is it necessary to drop index ('task_id') ????

I only put that in there because somewhere along the line a second index was accidentally created on task_id with the name 'task_id_2'. It is not necessary to delete 'task_id', only 'task_id_2'. If this index does not exist then it does not matter.
