Hi I need some help with installation. I have managed to change a few files but I still get an error message. Here is the message:

Fatal error: Failed opening required 'classes/php_session.class.inc' (include_path='.;C:\phpdev\includesPATH_SEPARATOR../menuPATH _SEPARATOR../auditPATH_SEPARATOR../workflowPATH_SEPARATORC:\ phpdev\includes') in C:\phpdev\includes\std.singleton.php4.inc on line 39

Any help is appreciated
thanks

Your include_path is wrong. The string PATH_SEPARATOR should be replaced with ';' (semicolon).

File include.general.inc contains the following code:

```
$include_path = ini_get('include_path');
$include_path .= PATH_SEPARATOR .'../menu';
$include_path .= PATH_SEPARATOR .'../audit';
$include_path .= PATH_SEPARATOR .'../workflow';
ini_set('include_path', $include_path);
```

Here PATH_SEPARATOR is a constant which varies between *nix and Windows systems.

You did not amend this code by any chance, did you?

hi I did not change the include file save for the path only and here is a portion.
Your help is appreciated

.....

```
// This file contains generic functions

// modify INCLUDE_PATH
$include_path = ini_get('include_path');
if (preg_match('/C:\\\phpdev\\\includes/i',$include_path, $regs)) {
    // this applies to my home PC only - remove directory and append it later
 $include_std = PATH_SEPARATOR .$regs[0];
 $include_path = str_replace($include_std, '', $include_path);
} // if
$include_path .= PATH_SEPARATOR .'../menu';
$include_path .= PATH_SEPARATOR .'../audit';
$include_path .= PATH_SEPARATOR .'../workflow';
if (isset($include_std)) {
 $include_path .= $include_std;
} // if
ini_set('include_path', $include_path);

unset($include_path, $include_std, $regs);

require_once 'config.inc.default';
require_once 'error.inc';

// are we using PHP 5, or something earlier?
if (version_compare(phpversion(), '5.0.0', '<')) {
    require 'std.singleton.php4.inc';
```

I see that you have changed some code in file 'include.general.inc'. You are not supposed to do that. You only change the files that you are directed to change in the installation instructions. Please reload 'include.general.inc' from the downloaded zip file and try again.

If that still causes a problem then place the following line:

```
echo $include_path;
```

just before the line:

```
unset($include_path, $include_std, $regs);
```

Your include_path directive is not being set correctly, and I want to see what is causing it.

Ok I copied the file afresh but I still get this error message:

Fatal error: Failed opening required 'config.inc'
(include_path='.;C:\phpdev\includesPATH_SEPARATOR../menuPATH
_SEPARATOR../auditPATH_SEPARATOR../workflow') in C:\phpdev\includes\include.general.inc
on line 27

then i copied the line in the include file and here is the error message its giving:

.;C:\phpdev\includesPATH_SEPARATOR../menuPATH_SEPARATOR../au
ditPATH_SEPARATOR../workflow
Fatal error: Failed opening required 'config.inc'
(include_path='.;C:\phpdev\includesPATH_SEPARATOR../menuPATH
_SEPARATOR../auditPATH_SEPARATOR../workflow') in C:\phpdev\includes\include.general.inc
on line 27

I appreciate your help.
Thanks

Something is wrong with your PHP installation as it is not replacing the name
PATH_SEPARATOR with the single character which is the separator for your operating system (';'
for Windows, ':' for *nix). Take a look at http://uk3.php.net/manual/en/function.set-include-path.php
