Hi Tony,

when I want to create a new list1 or list2 pattern I get the error message, shown above. Did I miss a database change in one of the releases?

Best regards,

Juergen

According to my records the MNU_PATTERN table and its foreign key on the MNU_TASK table has existed since version 1.5.0 dated 2006-04-10.

I set up the system again with the schema.sql files coming with 2019.05.01 without my application and I got the same error message. What else could this be?

I copied the include files of V 2.11.0 and the screen: Generate PHP scripts (b) - Enter Details appears again without the SQL error.

It would appear that I introduced a bug into script include.library.inc in version 2.12.0, so reverting to the version in 2.11.0 would certainly fix it. I have sent you a copy of the latest unbuggy version via email as for some reason my server won'y let me perform any uploads.
