Hi all !

I have a problem during authentication.

I type the identifier: MGR

the password: and I understand correctly that I have to type in password!

And I get a very dry message: "Security Violation"

same attempt with demo / demo same result!

I downloaded the latest version (2.16.0) of the Radicore framework.

I installed it on a Windows 7 Pro SP1 machine

I use on this same machine: WAMP 32 bits 3.17

my .htaccess looks like this:

```
-----8<-----8<-----8<-----8<-----8<-----8 <-----8<-----8<-----8<-----  
<Files ~ "\.inc$">  
  Order Deny,Allow  
  Deny from all  
</Files>
```

```
php_value include_path
```

```
".;D:\wamp32_317\www\radicore\includes;D:\wamp32_317\www\radicore\menu;"
```

```
php_value default_charset "UTF-8"
```

```
php_value mbstring.internal_encoding "UTF-8"
```

```
php_value register_globals 0
```

```
php_value magic_quotes_gpc 0
```

```
php_value magic_quotes_runtime 0
```

```
php_value magic_quotes_sybase 0
```

```
# php_value session.use_cookies 1
```

```
# php_value session.use_only_cookies 0
```

```
# php_value session.use_trans_sid 1
```

```
php_value session.use_cookies 1
```

```
php_value session.use_only_cookies 1
```

```
php_value session.use_trans_sid 0
```

```
php_value session.gc_maxlifetime 14400
```

```
php_value session.cookie_httponly 1
php_value arg_separator.output "&amp;"
php_value url_rewriter.tags "a=href,area=href,frame=src,input=src,fieldset="
php_value always_populate_raw_post_data -1
```

-----8<-----8<-----8<-----8<-----8<-----8 <-----8<-----8<-----8<-----

file : config.inc looks like this (extracts)

-----8<-----8<-----8<-----8<-----8<-----8 <-----8<-----8<-----8<-----

...

```
// set this to TRUE to write all sql queries to file 'sql/<script_id>.sql' (for debugging)
$GLOBALS['log_sql_query'] = true;
```

...

```
// defines directory into which error logs will be written
//define('ERROR_LOG_DIR', $_SERVER['DOCUMENT_ROOT'].'/error_logs');
```

...

```
// causes the logstuff() function to write details to the log file
define('LOGSTUFF', true);
```

...

-----8<-----8<-----8<-----8<-----8<-----8 <-----8<-----8<-----8<-----

I guess: "There is something rotten in the state of my setup"

What else can I check to resolve this issue? Ideas ?

cordially

fabrice94

Yes, you MUST use a password. That message simply means that the combination of user_id and password that you entered is not valid. Can you use the combination shown at the bottom of the screen (demo/demo)? Have you loaded the database data as shown in point 5 of the installation instructions at <https://www.radicore.org/installation.php>?

same attempt with demo / demo same result!

ok I'm gonna check again the point 5 of installation.
I'll let you know if results are better.

OK I've done again the point 5 and now I got this kind of message :

```
D:\wamp32_317\www\radicore\includes\include.library.inc:7457 :string '  
2020-11-07 23:20:51  
Fatal Error: MySQL: Illegal mix of collations (utf8_general_ci,IMPLICIT) and  
(utf8_unicode_ci,IMPLICIT) for operation '=' (# 1267)  
SQL query: SELECT mnu_role.role_id, mnu_role.start_task_id, allow_responsive_gui, (SELECT  
GROUP_CONCAT(role_id ORDER BY role_id SEPARATOR ',') FROM mnu_user_role WHERE  
user_id='MGR' AND start_date='2020-11-07 00:00:00') AS role_list  
FROM mnu_user_role  
LEFT JOIN mnu_role ON (mnu_role.role_id=mnu_user_role.role_id)  
WHERE mnu_user_role.user_id='MGR' AND mnu_'... (length=5148)
```

So I'll reinstall all from scratch and let you if Encouter the same problem.

thank you for your answer

OK I've Reloaded from scratch every
database (checked utf8_unicode_ci) for each one database,
schema.sql,
and data file.

Now I reach the message of the day screen

Thank you again for your quick answer and concise support

I'm glad you got it sorted out. I hope you have fun with my framework.
