Subject: Key value / special characters /add4

Hi Tony,

I have problems with an add4 pattern each time I want to insert records with special characters ('-', ':', '_') in the key field.

The following error message comes up:

Fatal Error: Cannot extract token from: ':2:1' (# 256)
Error in line 9143 of file 'C:\xampp\htdocs\radicore\includes\include.library.inc'.

Is this a bug or do you have a reason for this behaviour? If I insert the records with an add1 pattern, one by one, there is no problem.

It was a bug, but in my code! Sorry for the post. I had a wrong syntax for the value of the key field in the $where clause.
