Subject: Drop Down - PDF Output

Hi Tony,

I have a field with name mv_berechnung shown as dropdown list with values defined in the language_array.inc ($array['brutto_netto'] = array('B' => 'Brutto','N' => 'Netto');).

In the detail screen I see the representation value ('Brutto'/'Netto'), in the list screen the values 'B'/'N' are shown because I change this in the _cm_formatData() method by unset($this->fieldspec['mv_berechnung']['control']);

How can I achieve this result in the pdf output ? I have a switch clause in _cm_formatData() where I wrote this command under 'pdf-list' but nothing happens. In the pdf (output2 pattern) I see the representation value (which is to long) and not the value which is stored in the database ('B'/'N').

You should have the code which unsets the 'control' property of that column in the _cm_changeConfig() method, not the _cm_formatData() method. This is because the _cm_formatData() method is called at the end of the formatData() method which would have already replaced the value with the representation.

That makes sense! :d Now it works in the right way. Thank you.
