Hi Toni,

after installing V 2.19.0 I get the following error when calling logon.php:

```
Fatal error: require(): Failed opening required 'include.general.inc'  
(include_path='.:usr/local/lib/php:/home/radicore/includes' ) in  
C:\xampp\htdocs\radicore\menu\logon.php on line 28
```

The include_path in my php.ini directs to the correct directory. What can I do?

Best regards,

Juergen

What is the correct directory? If that directory is not shown in the error message then that directory is not being searched. Do you have an htaccess file which modifies the includes_path?

I only copied all the files of V 2.19.0 in my directory.

I attached a screen shot of the phpinfo.php of the include_path.

You haven't answered the question "What is the correct directory?" If this directory is not in the include_path then that is your problem.

The correct directory is c:\xampp\htdocs\radicore\includes.

It is shown in the column master value of the directive include_path in the phpinfo.php, separated by semi-colons.

It was the .htaccess file. I copied the file coming with the new version V 2.19.0 and this caused the problems. When I change the include_path in this .htaccess file everything works fine again.

You should have noticed that the error message did not show the correct directory in its include_path, and this should have given you a clue that the default setting in your php.ini file was being altered at runtime.

Whoops! I will try to remove that from future releases.

I've configured radicare with the following setting. I am a window user.

PHP 5 and above and Apache version 2.4

1 => Include path in htaccess file. My xampp in installed on D drive
php_value include_path ".,D:\xampp\htdocs\radicore\includes"

2=> changing in php ini file. The include path in htaccess and php ini files must be the same.

```
include_path = ".;D:\xampp\htdocs\radicore\includes"
```

3=> changing in httpd.conf file

```
<Files "htaccess.txt">
```

```
    Require all denied
```

```
</Files>
```

and

```
<Directory "D:/Apache2/htdocs">
```

```
    AllowOverride All
```

```
    Require all granted
```

```
</Directory>
```

Also uncomment xsl extension in php ini file.

for window user and php version greater than or equal to 5 and apache 2

path in htaccess file

```
php_value include_path ".;C:\xampp\htdocs\radicore\includes"
```

path in php ini file

```
include_path = ".;C:\xampp\htdocs\radicore\includes"
```

copy and paste the provided files and directory lines under apache2 in httpd.conf file.

uncomment xsl extension in php ini file.

that's all.
