Can I have a fillcolor on alternate rows in the multi sections? Or does this possibility only exists for the body in list view?

Currently this option only exists for the body part in a list view.

This option is available as of RADICORE version 2.29.0. Look for the 'fill_alternate' option. An example can be found in the online demo - go to the "List Task (process)" screen, search for tasks with the 'LIST1' pattern, then press the "Nav Buttons (PDF)" button. You will see that alternate rows are highlighted with the 'fill' colour.

How do I use it? If I insert the following line in the pdf.styles.inc nothing happens.

$style['foobar']['fill_alternate'] = array(100,100,100); Â Â Â Â Â // colour for alternate colour

Take at look at this page. That will show you some sample output which I have built into the framework. Just run the "Nav Buttons (PDF)" task and you can see the output, then look at the code.

You need to ensure that the style you have added to the pdf.styles.inc file is actually mentioned in your report structure file.

Thank you, works fine now. After I understood that the alternate colour is white and the fillcolour is the colour, defined in the pdf.styles.inc.
