When trying to delete a task in menu system the following error message comes up:

Fatal Error: Uncaught exception from Exception, message = require_once(classes/mnu_chart.class.inc); failed to open stream. No such file or directory, code=216, file=C:\xampp\htdocs\radicore\includes\std.singleton.php5.in c, line=171 (# 256)

Error in line 496 of file 'C:\xampp\htdocs\radicore\includes\error.inc'.

PHP_SELF: /radicore/menu/mnu_task(del1).php

CURRENT DIRECTORY: C:\xampp\htdocs\radicore\menu

The file mnu_chart.class.inc isn't in the version 2.26.0 zip file.

Whoops! :blush: The attached update will avoid looking for the file if it does not exist.

File Attachments
1) mnu_task.class.zip, downloaded 794 times

Sorry, the original file mnu_task.class.inc was in the original version. I obviously searched for a wrong file name.

I copied the new file in menu/classes and now the next error appears. When I want to delete a navigation parent.

Fatal Error: Unable to locate '.dict.inc' file for table 'mnu_task' (# 256)

Error in line 7000 of file 'C:\xampp\htdocs\radicore\includes\std.table.class.inc'.

PHP_SELF: /radicore/menu/mnu_nav_button(list2)a.php

CURRENT DIRECTORY: C:\xampp\htdocs\radicore\menu

I exported all the tables in the menu database to php but without success.

The only script in that zip file was mnu_task.class.inc, so this should not have affected your existing copy of mnu_task.dict.inc. I have tested this on my PC and the only way I can reproduce this error is by manually deleting the mnu_task.dict.inc script. You need to reinstate this file from the RADICORE download.

I think I found the problem. In the past I always copied the new files in the existing radicore directory. Now, I renamed all the sub-directories such as dict, menu, SOAP etc. and then copied the new directories of version 2.26.0 into the radicore directory. Now everything works fine. Sorry again for the inconvenience. In the future I will do the update in this way.
