Hi Tony,

installing the new version 2.28.0 causes the following error when trying to print a pdf.

2024-05-06 10:50:29
Fatal Error: Uncaught exception from TypeError, message = array_map(): Argument #2 ($array) must be of type array, bool given, code=0, file=/var/www/vhosts/mgh-saar.de/includes/tcpdf/include/tcpd f_fonts.php, line=2002 (# 256)
Error in line 510 of file '/var/www/vhosts/mgh-saar.de/includes/error.inc'.

Is this a problem in my code?

There is a line of code in the TCPDF library like this:
$chars = TCPDF_STATIC::pregSplit('//','u', $str, -1, PREG_SPLIT_NO_EMPTY);
which is returning a boolean instead of an array. I don't know why it is doing this, so I have added the following 3 lines after it:

Â Â Â if (!is_array($chars)) { Â Â Â // *** AJM 07/05/2024
Â Â Â Â Â Â Â $chars = array(); Â Â Â Â Â Â // *** AJM 07/05/2024
Â Â Â } // if Â // *** AJM 07/05/2024

The amended script is in the attached zip file. Try it and see if it fixes your problem.
