When I import columns in the dictionary, the default values are enclosed in quotes. Is this a problem with my settings?

For example: field foo_bar, varchar(8) default value 00:00:00 will be shown in the dictionary as '00:00:00'. This leads to an error in the application because the field length is 10 and this is not entered.

Can you give me a copy of your CREATE_TABLE script? I have looked at several examples of columns with default values in my code, such as the created_date and created_user columns on virtually every table, and I can see nothing wrong. None of the default values shown in the "2updae Column" screen are enclosed in quotes.

I have inserted the create_table script of my local environment and of my server environment (1) in the zip file. Additionally I inserted a screen shot of the radicore column(list2).php site. The created date value is in quotes, too.

I have imported that table definition into my test database and I do not see the problem you have reported. However, I have recently made some changes to my code to remove some deprecation notices that appeared with PHP version 8.3 which I have included in the attached zip file. Can you try these out to see if they solve the issue?

Unfortunately the same result. In my local environment I have php 8.2.0 installed and in my server environment 8.2.24.

I also have problems with concat_ws with the following code:

```
$outer_sql_select .= ", CONCAT_WS(' ', CONCAT_WS(' ', spiele_ma_heim_name,
spiele_ma_heim_id), ' - ', CONCAT_WS(' ', spiele_ma_fremd_name, spiele_ma_fremd_id)) AS
spiele_gegner";
```

I got an error message, which I attached.

Can you give me a copy of the database schem which produced this error, plus a copy of the errorlog (the HTML file, not an image) so that I can run it om my PC with my versions of PHP and MySQL.

The generated sql query contains invalid syntax ,' - '--,' / '//,' - '--, which is why it fails. There is nothing in the RADICORE framework which does this. There must be something in your PHP configuration which does this, such as MAGIC_QUOTES. What version of PHP are tou using? I am currently on 8.3.13

I am using 8.2.0 at the moment. I will install 8.3.13 and see if it works.

I found the error in my code: I have to enclose the select statement with " and not with '. If I do this, everything works fine.

I have been caught out by this on several occasions, but as soon as the error is reported I know how to fix it.

I read the documentation of mariadb and I can say the following:

there can either only be "spaces" in the string '\ ' or only other characters! '\(' both together -> error '\ ('

If I have a string like ' (' then I need to split it in three strings, than it works. '\ ', '\(', '\ ',
