Hi Tony,

after installing V 2.30.0 I get an 404 error, see attached screenshot. Is this because of deprecated Apache and php? And the zip file contains a config.inc.

I have removed the erroneous file config.inc from the zip file.

The only reason I can think of for that 404 error is that the file radicore/menu/logon.php cannot be found. What is your document root?
