Subject: Proble with primary key + unique

I found out that when importing this table to radicore and exporting to php:

```
CREATE TABLE IF NOT EXISTS `programa` (
 `programa_id` integer NOT NULL AUTO_INCREMENT,
 `entidad_id` integer NOT NULL ,
 `nombre` varchar(30) NOT NULL default '',

 PRIMARY KEY  (`programa_id`),
 UNIQUE KEY  (`entidad_id`,`nombre`),
 unique (`programa_id`)
) TYPE=MyISAM;
```

the .dict.inc file generated includes this code which gives an error:

```
    $this->unique_keys[]                = array(,
                                        'nombre');
```

Yes, this is a bug - fix attached.

BTW, declaring 'programa_id' as both 'primary_key' and 'unique' is superfluous as a primay key is automatically unique.
