Subject: Multi2 -> popup2 not calling _cm_pre_updateRecord?

I have a multi2 screen with a popup2 for adding records, this really just updates the child record with the id of the parent.

The multi2 displays a league and it's teams. With the popup2 you can 'assign' teams to the league.

I'm trying to customise _cm_pre_updateRecord, but with the debugger I'm finding it doesn't get called, is this correct?

Can you point me to where should I look to check why it isn't being called?

When you use a popup the only custom methods which are called are as follows:

_cm_popupCall()
_cm_popupReturn()
_cm_post_popupReturn()

This is described in http://www.tonymarston.net/php-mysql/infrastructure-faq.html #faq17b.

The _cm_pre_updateRecord() method has nothing to do with popup processing, and is only used when a record is being updated.
