Hi,

Microsoft Workflow Foundation supports two different concepts of workflows sequential and state-machine.

See http://windowsworkflow.wordpress.com/2006/09/11/types-of-windows-workflows-sequential-vs-state-machine/

Is this applicable to Radicore workflow engine. What steps would be necessary to implement a state-based workflow?

Thanks for any help

I don't know. My activity-based workflow is good enough for my purposes, so I don't see any advantage in building another.
