Hi
How do i see the classroom example. There is no index file in that folder.
Further if I set the include path as
php_value include_path ".;D:\XAMPP\HTDOCS\RADICORE\INCLUDES

then do all include and require commands look for files in
D:\XAMPP\HTDOCS\RADICORE\INCLUDES always?

Thanks
Rahul

The Classroom prototype is included in the download in file radicore/classroom-prototype.zip. In order to be able to run this subsystem you must do the following:

Unzip the file to produce the 'classroom' directory. This must exist at the same level as the 'menu', 'dict', 'audit' and 'workflow' directories.
Load the contents of file radicore\classroom\sql\crss.menu_export.sql into your MENU database.
Load the contents of file radicore\classroom\sql\classroom.dict_export.sql into your DICT database (optional).
Run script radicore\classroom\sql\mysql\classroom-schema.sql to create the database and all its tables.
Run script radicore\classroom\sql\mysql\classroom-data.sql to load the initial data.

The tasks for the classrom prototype will now appear in the menu screens, so off you go.

In answer to your other question, every subsystem requires access to the files in the standard INCLUDES directory, wherever this may be.

Thanks
These steps worked.

Further just to add for someone else reading the post. After the above steps one can see the prototype application in HOME>>PROTO

Hello,

I also would like to see the prototype applications. I followed the steps for MENU and DICT, and SQL setup and all worked fine. However, I am a bit confused, where can I see the application (HOME >> PROTO ??!!).
Thank you.

Best regards,Dan

It should be visible as one of the menu buttons on the home page. In case it was not loaded correctly from the 'menu.menu_export.sql' file please do the following:

1) go to Home->Menu System->Task (Menu).
2) choose 'main_menu' and press 'Menu Items (1)' in the navigation bar.
3) press the 'New' button - the 'Search Task' screen should appear.
4) enter 'proto' as task_id and press the 'submit' button.
5) select 'proto' and press the 'choose' button.
6) this returns to screen (2) and 'proto' should now be in the list.

Press 'Home' in the breadcrumbs area, and the 'proto' button should now be visible.

It worked well.

Thank you!

Best regards,
Dan

I am sorry to say that the method mentioned here didn't work in my case. I unzipped the file and produced the classroom directory. Then I loaded the contents but I couldn't run the scripts. I am a little bit confused as to what I should be doing now. I hope that AJM will help me in this regard.

When you run Radicore do you see a menu item called "Proto" on the first page? If you select this item what do you see?
