I am trying to call GetExternalDate but this generates the following error:
[code]Fatal error: Call to undefined function getExternalDate() in C:\xampp\....\letter.class.inc on line 315[code]
My code was:
$rows[1]['column4'] = 'Exam Date: ' . getExternalDate ($curr_row['session_date']);
Have I performed the call incorrectly?

I'm afraid my documentation failed to point out that this is not a stand-alone function but a method within 'date_class' (which is in file std.datevalidation.class.inc). You can access it as follows:

$dateobj =& RDCsingleton::getInstance('date_class');
$output = $dateobj->getExternalDate($input).

Thanks - that was easy!
