Dear all,

Any body tell me, difference between logout and logout(all)?

Take a look at <http://www.tonymarston.net/php-mysql/dialog-types.html#menu-bar>

You are allowed to have multiple sessions open in different browser windows, so 'logout(all)' will close down \*ALL\* sessions, not just the one you are currently in.

Dear AJM,

Thanks for quick reply about my post.
