---

The documentation (<http://www.tonymarston.net/php-mysql/radcore-tutorial.html>) says:

"Screen titles originate in the task description field in the MNU\_TASK table."

I want to change the title of a list1 screen, that is, the title that exists between the Menu Bar and the Navigation Bar.

At present it is displaying the task id and not the task title.

I changed the task title using the following screen:

Home»Menu System»Task (Proc)  
but nothing happened.

Although I changed the description of the task I created, when I use it, the title displayed is the task id, in fact, the automatically generated task id (that is the identifier without any spaces) and not the task description.

<http://www.tonymarston.net/php-mysql/radcore-tutorial.html>

How can I make it display the task description?

Thanks in advance.

Screen titles are actually taken from the language\_text.inc files in the /text/<language> directory. This is an internationalisation (I18N) feature which allows text to be shown in different languages for different users.

You first need to use the "Export Subsystem" function which will create a file called /text/<subsystem>.menu\_export.txt, then you manually copy the relevant text into your language\_text.inc file.

This behaviour has changed as of version 1.77.0 - the screen title for each task will now be taken directly from the database instead of the language\_text.inc file. Foreign language versions will be obtained from the new MNU\_TASK\_ALT table.
