Hello:

This issue only occurs when I click on Home / Menu System / Subsystem

The result is:Quote:Forbidden

You don't have permission to access /radicore/menu/menu.php on this server.

This simply isn't true. Menu.php was already accessed to get here, plus all menu/mnu\_....php files have "644" permissions.

All other tabs in the Menu System work fine.

Sequence isn't important - clicking the Subsystem tab after clicking ANY other Menu System tab yields the same result.

What can I do to fix this?

Thanks.

That message is not being generated by the application, it is being generated by the web server. You need to check permissions on all files and directories.
