I have a non-database field on a detail screen, when click over column header the framework returns an error screen with the message "Unknown column 'xxxxxx' in 'order clause'". That's because radicore is trying to execute a select statement with an order by clause, the order by clause is over xxxxxx column.
Is there a way to block the 'order by' on click feature?

You can use the 'nosort' option as described in FAQ146

It doesn't work
Here is my code in cm_ChangeConfig function:

```
$this->fieldspec['product_mask']      = array('type' => 'string',  
        'size' => 12,  
        'noedit' => 'y',  
        'nosort' => 'y',  
        'nondb' => 'y',  
        'uppercase' => 'y');
```

Is something wrong?

Thanks for advance!

Sorry, my mistake!!!
I will change the screen file
