Tony,

Could you provide an example of the use of MULTI5?

I tried to use that transaction pattern, but the Selection Criteria area is not displayed. The html produced is:

```
<div class="outer">
  <table>
    <colgroup>
      <col width="25%" />
      <col width="*" />
    </colgroup>
  </table>
  <div class="scrolling"> </div>
</div>
```

It is obviously missing the thead and tbody tags.

The Data Area (Rows of Selected Data) is displayed normally.

Perhaps I forgot something in the update process from Radicore 1.78 to 1.79.

Thanks in advance for any suggestion.

PS. I had no problem generating a MULTI2 transaction using the same tables.

To have a field displayed in a particular zone on the screen you must have the following:
(a) The field must be in the $fieldarray array.
(b) The field must be in the screen structure file for that zone.
(c) If you want the field displayed with a particular HTML control then it must have the relevant details in the $fieldspec array.

Item (1) is important because in a MULTI5 pattern there is no automatic getData() on the database for the top zone, so you have to supply values manually.
